Title: How prisoners and soldiers are preparing student nurses for life on NHS frontline - February 2019

Summary: Today's student nurses must be equipped with a range of strategies if they are to successfully face these challenges. They must be emotionally and physically resilient while also possessing communication, teamwork and leadership skills. It's a tall order, but one which has been addressed at Dundee University with the support of local prisoners and soldiers.

Title: Healthcare students perceptions and experiences of making errors in simulation: An integrative review - February 2019

Summary: Research literature suggests that learning from mistakes facilitates new insights and leads to professional development. However, studies also suggest that making errors can be emotionally detrimental to learners. Given these contradictory findings, this literature review explores learners' views about this phenomenon.

Title: The impact on nursing students opinions and motivation of using a "Nursing Escape Room" as a teaching game: A descriptive study - January 2019

Summary: According to previous studies on nursing education, although the use of games can produce positive results, the vast majority are based on questions and answers or on clinical situations. As an alternative, the 'Escape Room' teaching game is a much more dynamic option to assess theoretical and practical knowledge, and it may also promote teamwork and the ability to perform under pressure.

Title: Collaborative learning: Application of the mentorship model for adult nursing students in the acute placement setting - March 2019

Summary: Students are allocated a named mentor for the duration of the placement and they are responsible for supporting and assessing the learner. Many studies have identified problems with this approach to mentorship, including lack of time to facilitate learning on a 1:1 basis. In response to some of these challenges, a collaborative model of mentorship is being adopted both internationally and nationally. This involves placing a range of 1st, 2nd and 3rd year students on placement together, with students being allocated specific patients to care for collaboratively, under supervision.

Title: 'Failure to fail': the teachers dilemma revisited - December 2018

Summary: In a cross-cutting edge article in this issue of *Medical Education*, Scarff et al. explore the literature on the 'MUM effect' and its relevance to performance assessment in medical education. The term 'MUM effect' is used to indicate that people generally prefer to keep Mum about Unpleasant Messages. Giving a fail to a medical student is such an unpleasant message. Understanding the 'MUM effect' could help medical educators to improve assessment in health professions education. This commentary aims to expand upon the authors' findings by further exploring and discussing this relevant issue.

Title: Organising near peer teaching programmes for clinical professionals - December 2018

Summary: Near - peer teaching (NPT) and peer - assisted learning (PAL) are topics that have frequently featured in *The Clinical Teacher* and other education journals in the last few years. Such learning and teaching is now undertaken in many health professional courses. There is a growing body of literature that indicates there are benefits of NPT for learners, teachers and faculty. This Toolbox is a succinct and practical article that considers definitions, evidence and delivery of NPT that draws on the authors' own experiences in their clinical settings. They present a case study and recommendations for consideration prior to any programme of NPT and during delivery, as well as stressing the importance of evaluation and ensuring sustainability.

Title: A conceptual framework for interdisciplinary education in engineering and nursing health informatics - March 2019

Summary: This paper discusses a conceptual framework for an interdisciplinary education in engineering and nursing health informatics. A team with diverse scientific backgrounds and perspectives is anticipated to effectively and efficiently address healthcare systems problems, which can be facilitated by highly integrated and interactive team settings.
